

## PRESS RELEASE - November 2007

### Diabetes innovator, Quotient Diagnostics exhibits at Medica 2007

Exhibiting at this year's Medica exhibition, the 39<sup>th</sup> World Forum for Medicine in Dusseldorf Germany from the 14<sup>th</sup> -17<sup>th</sup> November is Quotient Diagnostics Ltd.

Quotient Diagnostics is a company with a novel patented assay technology to address the treatment and management of diabetes and associated diseases. Used clinically, this innovative technology for measuring indicators can be employed to assess the risk of long-term complications in diabetes.

Quotient Diagnostics was founded in 2002 and is run by a team who combine expertise in biochemistry and instrumentation technology with substantial business acumen.

Its revolutionary new analytical system for A1c, Quo-Test, was launched last year at Medica. This now means that diabetes sufferers can be given a blood test to provide a picture of their average glucose control over the previous two to three months. The results are available in clinic in just three minutes and are crucially important in evaluating the effectiveness of the patient's treatment and management plan, helping to prevent or delay the start of diabetes complications such as nerve, eye, kidney and blood vessel damage.

Dr Greg Davidson, CEO, Quotient Diagnostics, said: "Since Medica 2006, the Quo-Test A1C system has undergone detailed clinical studies to validate its claim to provide laboratory performance in a cost effective Point of Care system. Quo-Test A1c will be available commercially in early 2008 and can be seen on our stand, **1E16, at Medica 07.**

Quo-Test's technology, originally conceived at St. Bartholomew's Hospital, London offers operating, performance and manufacturing advantages, which remain unmatched by any alternative approach to A1c testing.

.....End.....

Quo-Test Reader and test cartridge gives results in under 3 minutes.
